

Don't fool yourself, **APPEARANCE MATTERS**

You may be asking yourself... In this economy can I afford to improve my appearance? Can I change the effects of stress, sun damage, and facial aging without going into foreclosure?

YES! In one session, under no general or IV anesthesia, with the **Smart Xide DOT™ Laser (ProFractional CO2 laser)**, coupled with the latest in bio-engineered post laser medical skin care, and with the doctors choice in surgeons.

THE SCIENCE:

With the Smart Xide DOT™ (dermal optimal thermolysis) laser, there is a degree of versatility previously unseen in laser surgery. This device made in Florence, Italy takes CO2 fractional laser therapy to the next level. Photo damage acne scars, can be treated in one session with extremely little down time. This FDA-approved system lessens the down time from weeks to between 3-4 days, many people return to work in 24 hours. There is no delayed healing or "hypo" pigmentation that was evident with traditional resurfacing. Depending on the surgeon operating the laser all types of skin disorders can be treated from **wrinkling lax skin, sun damage, age spots, dark circles under the eyes, even pigmentation and aging changes on the neck, cleavage and hands.** This laser creates dermal new collagen (*neo collagenesis*) with predictable rapid healing; the device holds this distinctive edge when compared to competing lasers.

THE SURGEON:

Dr. Harold Bafitis, medical director of The Plastic Surgery Institute of The Palm Beaches, Inc., has been designated luminary, to instruct other physicians on the Smart Xide DOT™ laser. He has 20 years of experience in Plastic Surgery and has taught other physicians how to use CO2 lasers in the past; now with the advent of this new technology he has become a leader in DOT™ laser resurfacing. His own bio-engineered post laser medical skin program is included for all laser patients for up to 4-6 months post laser.

Don't trust this laser procedure to someone less than an expert in the field.
